COURSEWORK (2) Rubric

Criterion	Weight	What is assessed
Semantic HTML & structure	15%	Correct use of landmarks, headings, lists, tables and forms; document outline makes sense when read as an outline alone.
Screen reader support (ARIA)	15%	Meaningful labels, roles and live-region announcements for dynamic content (e.g. saved marks, validation errors, loading states); no redundant or misleading ARIA.
Visual and Keyboard accessibility	10%	Colour contrast meets WCAG 2.1 AA (4.5:1 text, 3:1 UI components/large text); interface remains usable at 200% browser zoom; not colour-alone for meaning. Every interactive element is reachable and operable by keyboard alone, in a logical order, with a visible focus state at all times.
Responsive design	10%	Layout adapts cleanly from a small phone width up to a desktop monitor, using CSS best practice (flexbox/grid, relative units, media queries).
Deployment	15%	Interface deployed correctly on real server and make it reachable via a registered domain
Code quality	20%	Well-organised, commented, valid HTML/CSS/JS with no inline styles/scripts and no console errors.
Accessibility statement & evaluation report	15%	Accuracy and depth of the submitted VPAT-style statement and the evaluation carried out against real tools/guidelines.

Grade Band	Semantic HTML & Structure Weight: 15%	Screen Reader Support (ARIA) Weight: 15%	Visual & Keyboard Accessibility Weight: 10%	Responsive Design Weight: 10%	Deployment Weight: 15%	Code Quality Weight: 20%	Accessibility Statement & Evaluation Report Weight: 15%
Outstanding 100%	Fully correct semantic structure throughout; outline is clean and logical when read alone.	Comprehensive, accurate labels/roles on all elements; all dynamic content properly announced; no redundant or misleading ARIA.	Fully meets WCAG 2.1 AA (4.5:1 text, 3:1 UI/large text); usable at 200% zoom; no colour-alone meaning; every element keyboard-operable in logical order with visible focus always.	Layout adapts cleanly from small phone to desktop; consistent CSS best practice (flexbox/grid, relative units, media queries).	Deployed correctly on a real server, fully and reliably reachable via a registered domain.	Well-organised, thoroughly commented, fully valid HTML/CSS/JS; no inline styles/scripts; zero console errors.	Highly accurate, in-depth VPAT-style statement; thorough evaluation against real tools/guidelines with clear findings.
Outstanding 95%	Correct semantic structure throughout with at most one trivial issue; outline clean and logical.	Accurate labels/roles on all elements; all dynamic content announced; at most one trivial redundancy.	Meets WCAG 2.1 AA throughout; usable at 200% zoom; keyboard-operable in logical order; at most one trivial lapse in focus visibility.	Adapts cleanly from phone to desktop; excellent use of flexbox/grid, relative units and media queries; at most one trivial glitch.	Deployed correctly on a real server and reliably reachable via a registered domain; at most one trivial issue.	Well-organised, thoroughly commented, valid HTML/CSS/JS; no inline styles/scripts; at most one trivial warning.	Highly accurate, detailed VPAT-style statement; thorough evaluation against real tools/guidelines; only trivial gaps.
Excellent 85%	Correct landmarks, headings, lists, tables, forms with trivial issues; outline reads well alone.	Labels, roles, live regions correct for nearly all dynamic content; minor redundant/misleading ARIA only.	Meets WCAG 2.1 AA almost everywhere; works well at zoom; logical keyboard order; focus visible with rare lapses.	Adapts well from phone to desktop with minor glitches; good use of flexbox/grid and media queries.	Reliably deployed and reachable via registered domain; trivial issues only (e.g., missing HTTPS).	Well-organised, clearly commented, valid HTML/CSS/JS; no inline styles/scripts; rare minor warnings.	Accurate, fairly detailed statement; solid evaluation with minor gaps.
Very Good 75%	Mostly correct landmarks, headings, lists, tables, forms; a few minor issues; outline reads well with small gaps.	Labels and roles correct for almost all elements; dynamic content announced with a few minor gaps; occasional redundant ARIA.	Meets contrast almost everywhere; usable at 200% zoom with minor issues; keyboard-operable in logical order with occasional focus lapses.	Adapts well across nearly all widths with minor glitches; good use of relative units, flexbox/grid and media queries, with small gaps.	Deployed on a real server and reliably reachable via a registered domain; minor configuration issues.	Well-organised and commented; valid code with a few minor validation issues; negligible inline styles/scripts; rare console warnings.	Accurate statement with good detail; solid evaluation against recognised tools/guidelines with some gaps.
Good 65%	Mostly semantic; minor heading/landmark issues; outline mostly sensible with small gaps.	Most elements labeled; some dynamic content announced; occasional redundant ARIA.	Most text/UI meets contrast; usable at 200% zoom with minor issues; mostly keyboard-operable with occasional problems.	Reasonable adaptation across most widths; occasional issues; mixed relative/fixed units.	Deployed on real server, mostly reachable; domain present with minor configuration issues.	Reasonably organised and commented; mostly valid; few inline styles/scripts remain; occasional console errors.	Reasonably accurate statement; evaluation against recognised tools/guidelines but lacking depth.

Grade Band	Semantic HTML & Structure Weight: 15%	Screen Reader Support (ARIA) Weight: 15%	Visual & Keyboard Accessibility Weight: 10%	Responsive Design Weight: 10%	Deployment Weight: 15%	Code Quality Weight: 20%	Accessibility Statement & Evaluation Report Weight: 15%
Clear Pass 55%	Generally semantic, but several heading/landmark problems; outline understandable with noticeable gaps.	Many elements labeled, but labels/roles incomplete in places; dynamic content announced inconsistently.	Contrast mostly met but with several failures; zoom usability or keyboard order has noticeable problems; focus inconsistent.	Adapts at main breakpoints but breaks at some widths; noticeable reliance on fixed units.	Deployed and generally reachable, but with occasional downtime or notable domain/configuration problems.	Organisation and commenting adequate but uneven; some validation issues; several inline styles/scripts; console errors recur occasionally.	Statement mostly accurate but with notable omissions; evaluation uses recognised tools/guidelines but is shallow.
Marginal Pass 45%	Some semantic elements, inconsistent; heading hierarchy has gaps; lists/tables/forms misused in places.	Some labels/roles present but incomplete; live-region announcements missing for most dynamic content.	Frequent contrast issues; poor zoom usability in places; illogical keyboard order; inconsistent focus.	Some breakpoints handled but breaks at common widths; heavy reliance on fixed units.	Deployed but unreliable, or reachable only via temporary/non-standard URL.	Some organisation, inconsistent; sparse comments; several validation issues; some inline styles/scripts; recurring errors.	Basic VPAT-style statement, limited accuracy; evaluation uses few/inappropriate tools.
Marginal Fail 35%	Few semantic elements used correctly; heading hierarchy frequently broken; lists/tables/forms often misused.	Few correct labels/roles; most dynamic content not announced; some ARIA misuse.	Widespread contrast failures; layout strains at 200% zoom; several elements unreachable by keyboard; focus rarely visible.	Limited adaptation; breaks at many widths; mostly fixed units.	Deployed but frequently unreachable; temporary/non-standard URL only.	Poor organisation; very few comments; many validation issues; frequent inline styles/scripts and console errors.	Statement superficial with significant inaccuracies; evaluation minimal and only weakly based on tools/guidelines.
Clear Fail 25%	Minimal semantic elements; headings/landmarks largely missing; outline broken.	Few/incorrect labels/roles; dynamic content not announced; ARIA misuse causes confusion.	Widespread contrast failures; layout breaks at 200% zoom; many elements unreachable by keyboard; no visible focus.	Minimal adaptation; major breakage on mobile or desktop.	Deployed but broken/inaccessible most of the time; no registered domain.	Poorly organised, minimal comments; frequent invalid code; multiple inline styles/scripts; many console errors.	Present but inaccurate, superficial, or not based on real tools/guidelines.
Little/Nothing of Merit 10%	Almost entirely non-semantic markup; headings/landmarks essentially absent.	Isolated or wholly incorrect ARIA; page not meaningfully usable with a screen reader.	Almost unusable visually or by keyboard; only isolated elements accessible.	Almost no adaptation; usable at only one screen size.	Deployment attempted but no working access; evidence of setup only.	Disorganised, largely invalid or barely functional code; pervasive inline styles/scripts and errors.	Token statement or report with almost no accurate content.
No Marks 0%	No semantic structure; div/span soup, no meaningful outline.	No ARIA/labeling; dynamic content invisible to screen readers.	Fails contrast; unusable at zoom; colour-only meaning; keyboard navigation broken.	No responsiveness; layout fixed/broken on other screen sizes.	Not deployed; no working link.	Code missing, invalid, non-functional; pervasive inline styles/scripts; constant console errors.	No statement or report submitted.
